git add/mv/rm

git commit

git commit -a

git reset <file>

git reset <commit>

git diff

git diff HEAD

git clone/pu

Git configuration level.

3 - Configurations:

System → 'git config -system'
Saves to : /etc/gitconfig

global → 'git config -global'
Saves to ~/.gitconfig (windo)
(users)

local → git config -local
or
'git config'
Saves to : git/config
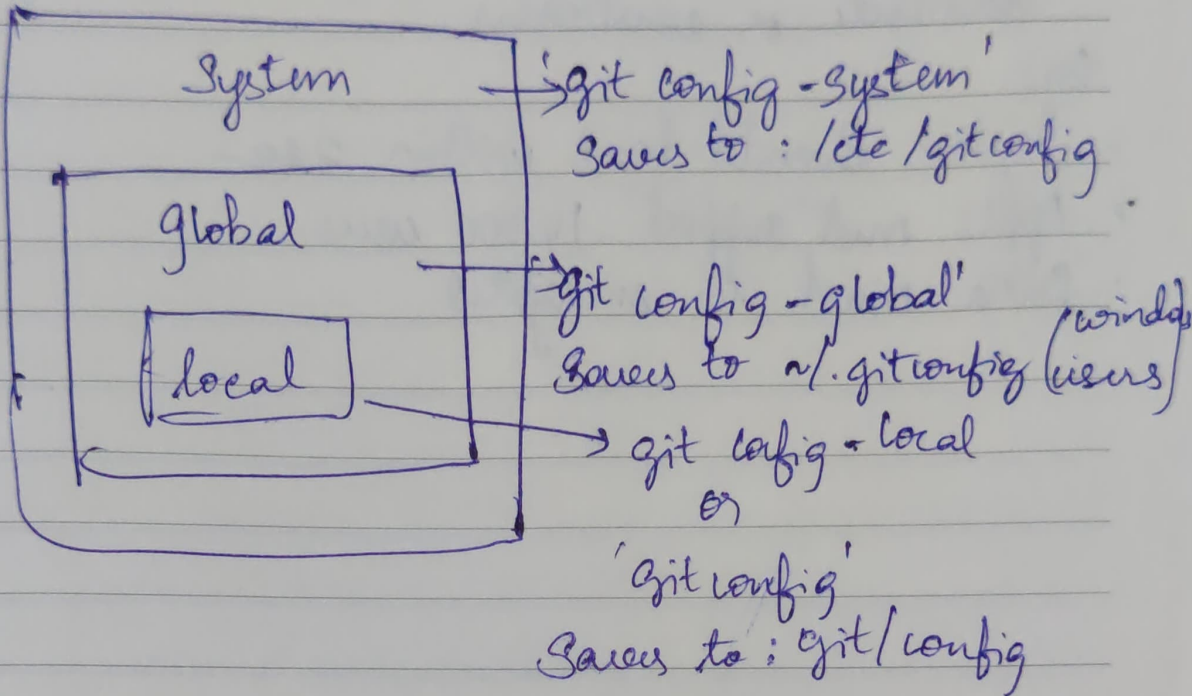

Local overrides Global & Global overrides System.

GIT

GIT

1. Generate Classic Token (SAT) Done ✓
2. Classic Token gunrated in Setting
   Developer option.

2. Create New Repository
   • Subset ID_Name as name of Repo
   • Public Repo
   [✓] Add a README file
   Create Rep.
   Repo created. (Remote repo)

Local system (Git installed) in C Drive

Launch Git Bash.
   write

   git clone URL

   URL → under [✓ Code]
                ↓
          HTTP link. → Repo link

then Remote Repo created

3. Go to Clone Repo
   type   cd SubID_Name

4. Link Remote Repo to Local Repo. → Connect.

Create Text file, add some text.

• Open git bash (Launch)

type git commit -m "First commit"

Next git push.
again git push.

then enter Credentials in Token where
paste the generated token credentials
which is there under Token

then Ok,
then both of them are linked.
we can see same in both Remote & Local.
